

Design and Test Plan for Scaled-Up Torrefaction Unit

Mark Severy
Research Engineer
Schatz Energy Research Center
Humboldt State University

June 29, 2016

Torrefier Specifications

- » Model: Norris Thermal Technologies, Biogreen CM600
- » Feedrate: 440 – 900 lb/hr
- » Feedstock Specifications: Approximately < 1" particles

Design Improvements

- » Increased throughput
- » Reduced air infiltration in reactor
- » Increase capacity of air locks
- » Improved gas scrubbing and product cooling systems

Reactor Temperature Profile

Reactor Temperature Profile

Test Plan Overview

- » Field site in Samoa, CA
- » Torrefier on site for three weeks
- » Produce briquettes from torrefied biomass
- » Operate with one feedstock at multiple operating points

Site Plan

Test Objectives

- » Understand reactor temperature profile in larger machine
- » Explore relationship between feedstock moisture content and level of torrefaction
- » Build upon data set to include syngas and emissions data
- » Observe how torrefier setpoints influence briquette quality

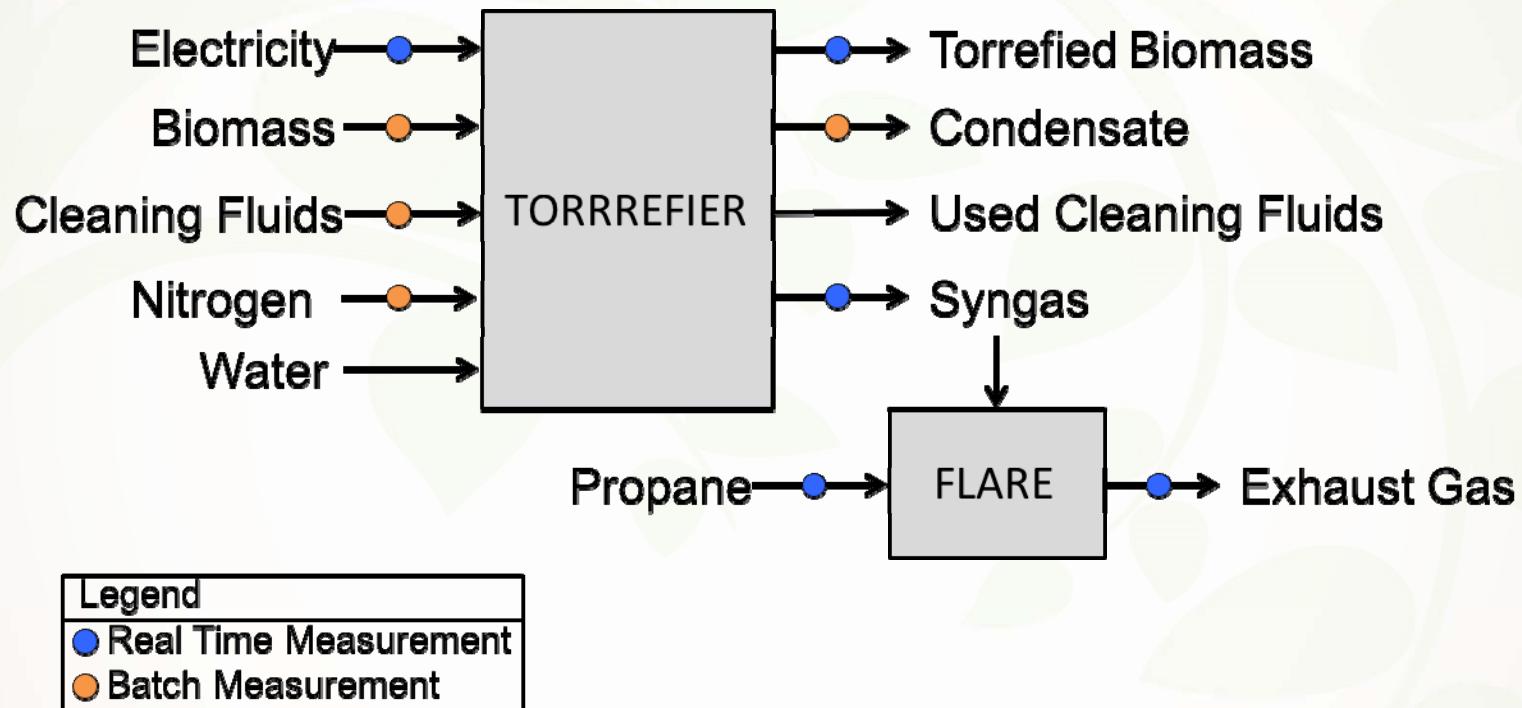

Test Plan for July 2016 in Samoa, CA

Dates	Monday	Tuesday	Wednesday	Thursday	Friday
7/11 - 7/15	Receive		Instrumentation		Preliminary Tests
7/18 – 7/22	275°C 10 min/20 min 15% MC	300°C 10 min/20 min 15% MC	325°C 10 min/20 min 15% MC	300°C 10 min/20 min 15% MC+ash	275°C 10 min/20 min 5% MC
7/25 – 7/29	300°C 10 min/20 min 5% MC	325°C 10 min/20 min 5% MC	300°C 10 min/20 min 5% MC+ash	Public Demo	Ship Out

- » Produce briquettes from torrefied material on following day.

Measurement Plan

List of Measurements

<i>Real Time</i>	<i>Feedstock Analysis</i>	<i>Torrefied Biomass Analysis</i>	<i>Briquette Analysis</i>
<ul style="list-style-type: none">• Throughput rate• Bio-oil production rate• Reactor temperature profile• System pressures• Syngas composition and flow• Emissions composition and flow• Propane consumption• Nitrogen consumption• Electricity demand• Labor requirements	<ul style="list-style-type: none">• Bulk density• Moisture content• Proximate analysis• Calorific Value• Particle size distribution• Grindability• Water Absorption• Transportation Simulation• Durability (Briquettes)
